<b>Description of Events:</b>	<p>After a transfer of sulfuric acid between railcar TILX 100524 and CTL Trailer# 23088 took place, product was observed leaking running down the side of the railcar. The railcar remained set up after first transfer. A Loader, with the required PPE, climbed to the top up the railcar and identified the product tee fitting as being loose. Pressure inside the railcar forced liquid out from around the loose fitting. Several pictures were taken of the spill and the leaking tee fitting. Approximately 2 gallons of product leaked from the railcar to the 1'x 1" square gravel area beside the track. No product entered the storm drain. Lime was used to neutralize the acid. All clean up material was put into containers and labeled.</p>					
<b>Recommend Actions Taken:</b>	<p>ROOT CAUSE: 1. The railcar was not depressurized prior to the Loader leaving the transfer area unattended because it was not specifically stated in the Site-Specific Procedure (SSP). 2. The pipe connection was not properly tool tight when the transfer was originally set-up due to wear and tear of the fitting. 3. The stainless steel pipe tee was not properly inspected to identify excessive wear before being utilized for the transfer. CORRECTIVE ACTIONS: 1. Add warning to SSP 3025-002 to reflect that railcars should be depressurized if there isn't another trailer readily available to load. 2. Terminal will inspect and remove from service all fittings and connections that may be damaged or have excessive wear and tear from use.</p>

<b>Description of Events:</b>	<p>NARRATIVE: On October 13th at 11:45am, a rail to truck ethanol transfer was being conducted. This was a four compartment trailer and the first compartment had been completed. The second compartment was to receive 2000 gallons. Loader made all necessary connections and then set the pump pre-set meter for 2000 gallons. He started the transfer and periodically observed the meter for gallons pumped. He first observed 1000 gallons had been transferred then looked back, and noticed the meter was stuck on 1600 gallons. As he reached to shut down the transfer, he noticed compartment # 2 had overfilled. Approximately 5 gallons of ethanol was retained in the drip pan and an additional 5 gallons overflowed the drip pan and contacted the ground. No drains or water was affected.</p> <p>AWARENESS ITEMS: 1. The scully switch cover was closed and locked and keys were controlled by management. Always ensure the pump is not in bypass mode prior to locking the cover. 2. Pump had a history of mechanical failure with its last repair being to the volume meter on 9/20/11. This was the second transfer after the repair. 3. The scully is a protective system put in place to ensure trailers are not overloaded. When operated in bypass mode, we work without any backup protective system. 4. Scully lights were tested and were proper working order: green-good ground; red- no ground; no lights if in bypass. 5. Floater employee was familiar with ethanol operation.</p>					
<b>Recommend Actions Taken:</b>	<p>ROOT CAUSES: 1. Equipment failure. It was determined by an outside mechanic that the meter box was not functioning properly. RBT made the recommendation to have the preset meter, temperature compensator and volume meter replaced. 2. The pump was being operated while in bypass mode. CORRECTIVE ACTIONS: 1. Pump was immediately locked out and taken out of service. 2. The inspection of all scully switches will be made part of the monthly inspection to ensure they are not in bypass mode. This is to be documented on the inspection</p>

---------	-------------------	-----------	------------------	----------------	------	----

**Description of Events:** On October 8, 2010, five to seven gallons of Hydrogen Peroxide impacted the asphalt during a transfer. After the transfer was verified, the bleeder valve was opened in order to prime the equipment. Once the equipment was primed and the transfer up and running, the loader did not close the valve. Residual product released into the reservoir tank, resulting in a five to seven gallon release of product impacting the asphalt. Water was applied to the affected area as per the MSDS. After speaking with the loader who did the previous transfer on October 7, 2010, he informed the Terminal Manager that the reservoir had been filled with water during his transfer; therefore the amount of actual Hydrogen Peroxide impacting the asphalt may be less than the estimated five to seven gallons.

There were no injuries, and no drains were impacted.

**Recommend Actions Taken:** ROOT CAUSE: The Loader failed to close the bleeder valve after priming the pump. In a post incident interview the Loader stated that he was having personal issues after a recent car accident. He was stressed over the property damage which made him lose his focus; he did not communicate this to his Supervisor at the beginning of the shift. CORRECTIVE ACTIONS: 1. SSP 3025-006 was updated to include process of closing the valve after the pump is primed. All employees were re-trained on updated procedure. 2. High density five gallon bucket is now being utilized under the bleeder valve on every transfer. 3. The Verifier will remind the Loader to close the bleeder valve once equipment is primed during verification. 4. Contact Shipper and TRANSFLO to discuss the possibility of obtaining a pump with a spring loaded valve which would automatically close once the valve is released after the pump is primed. 5. All employees were asked to speak up during morning safety meetings if they had any issues that would hinder their performance

**Description of Events:**

Railcar GATX #95781 arrived at Tampa TRANSFLO terminal on 9/19/2012. Arrival Inspection was conducted on 9/19/2012 by Terminal Manager. Only documented defect was a missing chain on the sample tube cap. No indications of any defects or releases. Two full truck loads and one partial were taken off railcar GATX 95781 on 9/19/2012; the day before the release. No issues observed during this transfer. There was no release of gas when the gate valve was opened. The railcar was not being offloaded when the release was discovered on 9/20/2012. The loader was going to connect a vapor recover hose from an empty railcar into GATX 95781. He connected to the empty railcar and as he was going to connect the vapor recovery hose to GATX 95781, he discovered the leak. No issues noted until valve was opened. The terminal and CSX/TRANSFLO notified the local Fire Department and Hillsborough County EMA. Emergency response contractor was also deployed onsite to evaluate situation and car was then off-loaded without incident at 13:15. Temperature was approximately 77 °F at time of release on 9/20/2012. Average temperature on 9/19/2012 was 82 °F. RESCAR suspects temperature change may have been a factor, but unsure what caused seal to not set properly. Seal on gate valve of the liquid side not seated properly. RESCAR was not able to repair the valve on-site. Further information on cause may be available when repairs can be made off-site at the railcar repair shop. NGL secured a One-Time Movement Approval (OTMA) from the DOT before releasing railcar to a repair shop.

**Recommend Actions Taken:**

Awaiting results from repair facility.

**Description of Events:**

A Transfer was being conducted between railcar (UTLX 13923) and a single compartment trailer (23088) with a single dome. The loader climbed to the top of the railcar to prepare for the transfer shut down. He noticed product spraying from the jumper hose between the Air tee valve and the Product tee valve. The loader closed the product valve. The product was contained inside the track pans, no product contacted the ground. Team members responded immediately and applied soda ash to the spilled product. Clean up material was placed in designated drum and properly marked.

**Recommend Actions Taken:**

Continue to diligently perform arrival inspections and closely monitor loads in progress. Have placed in practice a policy of using most experienced loaders for sulfuric acid loads.

<b>Description of Events:</b>	On 11/11/15 Terminal Mgr Kevin Roberts was contacted by the CSX Switch Crew stating that CBTX 780830 (located on track 6) had some freezing on dome lid along with a "gas odor". The TM arrived at the terminal by 23:45 and immediately consulted with the Hillsborough Fire Department (on site). The TM along with fire rescue used the LPG rack on Track 6 to ascend the car. He opened the dome lid and discovered that the plugs on the liquid and vapor lines were not too tight. One of the liquid lines was slightly ajar due to a small amount of trash/debris in the valve not allowing it to seat properly. The TM tightened the valve and plugs. The hazmat responders tested the valves with a leak detector and determined that everything was secure with no LPG present.					
<b>Recommend Actions Taken:</b>	To prevent future actions: Entire terminal held a stand down to discuss the importance and methods for securing RCs. The terminal added a step in the process requiring a supervisor to secure all cars before departing every night.

<b>Description of Events:</b>	A release occurred on 7/15/2010 at 10:45 am while in the process of setting up a Basic Chemical Sulfuric Acid transfer to be loaded on trailer CTL 252. The loader set up the unloading tee on top of the railcar then failed to close the valves on the product tee before pressurizing the vessel. This resulted in a product release of estimated 50 gallons: 15 gallons on the asphalt and approximately 35 gallons in the storm drain containment. Once the spill was identified, the Loader immediately closed the product valve on top of the railcar and radioed a code yellow. The Tampa team immediately began to dam and dike the area with soda ash. After the spill was contained, the Manager notified the appropriate contacts.					
<b>Recommend Actions Taken:</b>	Retrain all employees on transferring corrosive product utilizing blower pac/air compressor work instruction SSP 3025-002-KMMS-ALL and document training on form S1686. Loader is to ensure that all valves on tee fittings are in the closed position after connecting to the railcar. Loaders retrained on never pressurizing a railcar prior to verification that all hoses and fittings are connected.

**Description of Events:**

On 8/17, at approx 5:45 am, while making his rounds, the Crew Leader noticed a shiny substance in the track pan and ballast on Track 5. When he approached the loader to question, the loader stated that sulfuric acid had spilled from the product cap. 1. The TM re-reviewed the SSP for transferring sulfuric acid two weeks prior to the incident occurring. 2. The importance of immediately reporting incidents was recently discussed with all terminal personnel on the heels of a previous release.

**Recommend Actions Taken:**

ROOT CAUSES: 1. Employee did not ensure that the railcar was depressurized, per the SSP 3025-002, prior to opening the product cap. Employee was in the habit of opening the product valve without relieving pressure from cars with a safety valve on the product line. 2. Employee was identified as learning better through repetition rather than by the SSP and was not properly monitored to ensure all necessary steps were followed to prevent incident. CORRECTIVE ACTIONS: 1. TM realigned loaders to ensure that a senior loader conducts acid transfers. A secondary loader will be assigned to ensure continuity and coverage. 2. Ensure employees are monitored and demonstrate proficiency in the task at hand prior to completing an Employee Demonstration Checklist and working unattended. 3. Certify a Spanish speaking trainer to ensure all components of the SSP are properly communicated

and adhered to.

---------	-------------------	-----------	------------------	----------------	------	----

ethanol was released onto the asphalt surface. The product was contained, cleaned and placed in 50 gallon drums labeled as hazardous waste.

**Recommend Actions Taken:**

Retrain all loaders on the proper way to set-up and perform all pump transfers that utilize venting or vapor recovery. Retrain all certified verifiers on the verification policies & procedures and stress the importance of a complete & thorough verification on each transfer. Retrain all certified verifiers on the importance of focusing on the task at hand. Ensure that a pre-load checklist is available for each transfer. Have every terminal purchase a 1 inch diameter, 12 to 14 inch long piece of PVC pipe to place on the air valve handle for each pump transfer that requires venting or vapor recovery. This piece of pipe needs to be painted a high visibility color.

<b>Description of Events:</b>	<p>NARRATIVE: On 9/26/11 at approximately 11:55 hrs an estimated 1 quart of Caustic Soda was released. A Transfer was being conducted between railcar (GATX 49425) and a single compartment trailer (22059) with a single dome. The loader noticed product leaking down the side of the railcar. The loader climbed to the top of the railcar and noticed product leaking from the jumper hose between the Air tee valve and the Product tee valve. The loader closed the product valve and then called code yellow. The product was contained inside the track pans; no product contacted the ground, water or drains. Team members responded to the code yellow and immediately brimmed and dike inside the track pan. Vinegar used to neutralize, and sand was used absorb the Caustic.</p> <p>AWARENESS ITEMS: 1. The Terminal Manager re-reviewed the SSP for transferring corrosive product via blower pac/air compressor on 8-9-2011 2. Ensure all valves, fittings, hoses and tools required to perform the assigned task are inspected as part of the daily inspection. 3. The ruptured airline was replaced 2 weeks ago. 4. The Loader was fully trained on this transfer and demonstrated proficiency.</p>					
<b>Recommend Actions Taken:</b>	<p>ROOT CAUSES: 1. Loader inadvertently opened the product valve and introduced product to the air line. 2. The jumper hose between air valve assembly and the product valve assembly ruptured when product was introduced.</p> <p>CORRECTIVE ACTIONS: 1. Retrain all employees to ensure valves are operated in accordance to the SSP. Retraining will be documented on Form 1686. 2. The air line was taken out of service and was replaced after the rupture.</p>

**Description of Events:** NARRATIVE: On 9/30 at 9:05am, the Crew Leader noticed Sulfuric Acid on the side of railcar GATX 5855. Code yellow was announced and several team members responded. A Loader, in all the required PPE, climbed to the top of the railcar and identified liquid seeping from the product hose. He re-positioned the product and the leak stopped. AWARENESS ITEM: 1. All product hose gaskets have recently been changed. 2. All sulfuric acid and caustic valves are inspected prior to being put into service. 3. Leak started 15 minutes after the transfer was completed.

**Recommend Actions Taken:** ROOT CAUSES: 1. Equipment failure: Product hose gasket leaked between product hose and product valve connection due to the alignment of the hose to the product valve. CORRECTIVE ACTION: 1. Recommended to TRANSFLO that a 45 degree fitting be installed between the product hose and valve, to allow for direct alignment and reduce the weight on the connection.

THE EMPLOYEE WAS IN THE ACT OF TRANSFERRING THE QUICK DRY PRODUCT FROM A TANKCAR TO A TRAILER WHEN HE NOTICED THAT A SMALL AMOUNT WAS LEAKING FROM THE DOME LID AND HE IMMEDIATELY SHUT THE PUMP OFF. THE METHOD OF TRANSFER WAS BY METERED PUMP AND THE EMPLOYEE WAS STANDING NEXT TO THE PUMP BUT LOST HIS FOCUS AND OVERFILLED THE TRAILER. MOST OF THE SPILLAGE WAS CAUGHT BY A DRIP BUCKET.

**Description of Events:** On February 8, 2013 at approximately 1620, an employee at the Tampa TRANSFLO terminal was performing railcar arrival inspection on railcar # PPRX 28503. At the time the employee observed product leaking (hexane) from dome lid and pressure relief device (PRD). He immediately reported the leak to the TRANSFLO terminal manager. Employee tightened dome lid which secured the leak from that area, however, product continued to flow from the relief device. Spill pans were placed in track pans under railcar to catch the liquid hexane that was being released. Once the Terminal Manager determined that leak could not be stopped by tightning the dome lid bolts, all terminal personnell were evacuated and the fire department was called. Hillsborough County Fire Rescue responded. Approximately 5 ½ gallons released and were captured in the spill pans. No other environmental impacts resulted. With the Fire Department present, 2000 lbs gallons of hexane was transloaded from the railcar to a truck trailer which reduced pressure on the railcar and eliminated the release of additional product. AWARENESS ITEMS: 1. Railcar arrived 07 February 2013 on the morning switch. 2. Railcar capacity is 29,918 gallons; Railcar Shipping Paper listed 28,290 gallons. 3. Ambient temperature in Tampa on 2/8/2013 was 85 degrees F. 4. Product expands as ambient temperature increases. 5. Pressure releif device was set at 75 psi. IMMEDIATE / DIRECT CAUSE: 1. Temperature Extremes - Product expanded in railcar resulting in the release of the pressure relief device and subsequent product release. BASIC ROOT CAUSE: 1. Railcar was overloaded at load port. Railcar headspace was only 1,628 gallons. Temperature extremes were not taken into account during railcar loading.

**Recommend Actions Taken:** IMMEDIATE / DIRECT CAUSE: 1. Temperature Extremes - Product expanded in railcar resulting in the release of the pressure relief device and subsequent product release. BASIC ROOT CAUSE: 1. Inadequate assessment of need and risks - Railcar was overloaded at load port. Railcar headspace was only 1,628 gallons. Temperature extremes were not taken into account during railcar loading. CORRECTIVE ACTIONS: 1. Tighten dome lid to secure release from the dome lid.-COMPLETED 2/8/2013 2. Off-loaded 2000 gallons of product which reduce pressure on railcar and stopped the product from leaking from the pressure relief device.- COMPLETED 2/8/2013

**Description of Events:** On Wednesday 4/15/15 at appx 10:45 hours a GATX crew in the terminal noticed that GATX 75227 had ice forming on the side of the dome lid. They notified terminal personnel and determined that a minor leak was the cause. A crew from SWS Environmental was dispatched to make repairs. They investigated the situation and determined that the liquid wheel valves on the liquid lines weren't seated correctly. The crew opened and closed the valves several times with the plugs all the way in. After doing this they bubble tested with soapy water and found no leaks. The plugs were cleaned and new pipe tape was applied. No further issues were detected.

**Recommend Actions Taken:** The crew opened and closed the valves several times with the plugs all the way in. After doing this they bubble tested with soapy water and found no leaks. The plugs were cleaned and new pipe tape was applied. No further issues were detected. Shipper was notified and the car was later emptied and released with no incident.

**Description of Events:** A loader was in the process of conducting a pump transfer of toluene for Ashland Chemical from railcar to truck on compartmented trailer #35629. The trailer compartment maximum was 2 450 gallons and the work order amount called for 2 270 gallons. When the meter reached 2 254 gallons the loader noticed product coming out from the top of the trailer. The load was shut down immediately. Approximately 15 gallons of toluene spilled on the asphalt containment area. The spilled material was contained cleaned and placed in an appropriate container for disposal.

**Recommend Actions Taken:** Ashland Chemical had a driver onsite and the pump was immediately red tagged and removed from service. The owner of the pump Ashland Chemical had their certified technician repair the meter and do a calibration check for accuracy on 10/28/2009. The meter was certified accurate by the Ashland Chemical representative at that time.

Description of Events:	TAMPA FL- TRANSFLO Date of Release: 1/9/2013 Material Release Description: Propane Quantity of Release: Estimated 2 341 lbs Cause of Release: On 09 Jan 2013 at approximately 1650 A TRANSFLO transloading employee ascended railcar #GATX 75297 for gauging purposes. The transloader opened the dome lid and found propane leaking from the pressure relief valve. The Terminal Manager & Regional Operational Manager for Kinder Morgan (terminal operator)were immediately notified. They assessed the release and immediately called for evacuation of the terminal employees and called 911. Tampa Fire Dept (TFD) Emergency Response Team & HAZMAT teams responded. TRANSFLO (terminal owner) CSX Hazmat were also notified. Water was applied by TFD which minimized the leak but it did not completely stop the release. At 1830 SWS Environmental Services arrived assessed the situation and applied hot water which stopped the leak. SWS environmental remained on site throughout the night to document railcar pressure readings. Pressure steadily dropped throughout the night from					

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

279 psi at 2300hrs to 255 psi at 0700hrs 10Jan13. First offload of propane occurred at 0700hrs on 10Jan13 which dropped the railcar pressure to 170 psi. Remaining propane was offloaded in 3 additional railcar to truck transfers. Residue railcar remains on-site at the Tampa TRANSFLO Terminal waiting for a One-Time Movement Approval from the FRA to move the railcar to the repair shop. ADDITIONAL INFORMATION: 1.Railcar was loaded in Illinois on 13Dec12; Recorded outage of 16" Temp 46 degrees. 2.Railcar arrived Tampa TRANSFLO terminal 27Dec12; Recorded outage of 12". Temperature 78 degrees. 3.No product was taken from nor added to this railcar since arrival at the TAMPA TRANSFLO Terminal. 4.Product does expand based on ambient temperature. 5.Temperature on 09 Jan13 in Tampa was 84 degrees (F). 6.Pressure Release Valve (PRV) is set at 280.5 psi 7.At load port the Railcar was BOL'ed with 134 001 lbs of product. 8.10 Jan13 – Railcar was emptied with the following lbs per load: o 1st load – 36 360 lbs. o 2nd load – 36 260 lbs. o 3rd load – 39 280 lbs. o 4th load – 19 760 lbs. o Total – 131 660 lbs. o Loss – 2 341 lbs 9.Vapor recovery operation: (From r/c GATX 75297 to TILX 3005958) • GATX 75297 starting PSI 165lbs • TILX 3005958: PSI 145lbs Outage 14.5" Temp 71 degrees • V/R stopped with PSI @ 185lbs Outage 5" temp 85 degrees on r/c TILX 3005958 10.Vapor recovery operation: (From r/c GATX 75297 to PLMX 135034) • GATX 75297 starting PSI 50lbs • PLMX 135034: PSI 125lbs Outage 11.5" Temp 72 degrees • V/R completed: GATX PSI 20lbs • PLMX 135034: PSI 140lbs Outage 8.0" Temp 76 degrees

**Recommend Actions Taken:**

ROOT CAUSE: Unknown at this time. Root cause will not known until railcar can be inspected at the railcar repair facility. CORRECTIVE ACTIONS: Work with TRANSFLO to ensure shipper (NGL Supply) submits a request for an One-Time Movement Approval (OTMA) and is granted approval to move the residue railcar from the terminal to the railcar repair shop for inspection and repair.

**Description of Events:**

On Wednesday 4/15/15 at appx 10:45 hours a GATX crew in the terminal noticed that GATX 75227 had ice forming on the side of the dome lid. They notified terminal personnel and determined that a minor leak was the cause. A crew from SWS Environmental was dispatched to make repairs. They investigated the situation and determined that the liquid wheel valves on the liquid lines weren't seated correctly. The crew opened and closed the valves several times with the plugs all the way in. After doing this they bubble tested with soapy water and found no leaks. The plugs were cleaned and new pipe tape was applied. No further issues were detected.

**Recommend Actions Taken:**

The crew opened and closed the valves several times with the plugs all the way in. After doing this they bubble tested with soapy water and found no leaks. The plugs were cleaned and new pipe tape was applied. No further issues were detected. Shipper was notified and the car was later emptied and released with no incident.

<b>Description of Events:</b>	TAMPA, FL- TRANSFLO Date of Release: 1/9/2013 Material Release Description: Propane Quantity of Release: Estimated 2,341 lbs Cause of Release: On 09 Jan 2013 at approximately 1650, A TRANSFLO transloading employee ascended railcar #GATX 75297 for gauging purposes. The transloader opened the dome lid and found propane leaking from the pressure relief valve. The Terminal Manager & Regional Operational Manager for Kinder Morgan (terminal operator)were immediately notified. They assessed the release and immediately called for evacuation of the terminal employees and called 911. Tampa Fire Dept (TFD), Emergency Response Team & HAZMAT teams responded. TRANSFLO (terminal owner), CSX Hazmat were also notified. Water was applied by TFD which minimized the leak but it did not completely stop the release. At 1830 SWS Environmental Services arrived, assessed the situation, and applied hot water which stopped the leak. SWS environmental remained on site throughout the night to document railcar pressure readings. Pressure steadily dropped throughout the night					

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

from 279 psi at 2300hrs to 255 psi at 0700hrs 10Jan13. First offload of propane occurred at 0700hrs on 10Jan13 which dropped the railcar pressure to 170 psi. Remaining propane was offloaded in 3 additional railcar to truck transfers. Residue railcar remains on-site at the Tampa TRANSFLO Terminal waiting for a One-Time Movement Approval from the FRA to move the railcar to the repair shop. ADDITIONAL INFORMATION: 1.Railcar was loaded in Illinois on 13Dec12; Recorded outage of 16", Temp 46 degrees. 2.Railcar arrived Tampa TRANSFLO terminal 27Dec12; Recorded outage of 12". Temperature 78 degrees. 3.No product was taken from nor added to this railcar since arrival at the TAMPA TRANSFLO Terminal. 4.Product does expand based on ambient temperature. 5. Temperature on 09 Jan13 in Tampa was 84 degrees (F). 6.Pressure Release Valve (PRV) is set at 280.5 psi 7.At load port the Railcar was BOL'ed with 134,001 lbs of product. 8.10 Jan13 – Railcar was emptied with the following lbs per load: o 1st load – 36,360 lbs. o 2nd load – 36,260 lbs. o 3rd load – 39,280 lbs. o 4th load – 19,760 lbs. o Total – 131,660 lbs. o Loss – 2,341 lbs 9.Vapor recovery operation: (From r/c GATX 75297 to TILX 3005958) • GATX 75297 starting PSI 165lbs • TILX 3005958: PSI 145lbs Outage 14.5" Temp 71 degrees • V/R stopped with PSI @ 185lbs, Outage 5", temp 85 degrees on r/c TILX 3005958 10.Vapor recovery operation: (From r/c GATX 75297 to PLMX 135034) • GATX 75297 starting PSI 50lbs • PLMX 135034: PSI 125lbs Outage 11.5" Temp 72 degrees • V/R completed: GATX PSI 20lbs • PLMX 135034: PSI 140lbs Outage 8.0" Temp 76 degrees

**Recommend Actions Taken:**

ROOT CAUSE: Unknown at this time. Root cause will not known until railcar can be inspected at the railcar repair facility. CORRECTIVE ACTIONS: Work with TRANSFLO to ensure shipper (NGL Supply) submits a request for an One-Time Movement Approval (OTMA) and is granted approval to move the residue railcar from the terminal to the railcar repair shop for inspection and repair.

<b>Description of Events:</b>		A loader was in the process of conducting a pump transfer of toluene for Ashland Chemical from railcar to truck on compartmented trailer #35629. The trailer compartment maximum was 2,450 gallons and the work order amount called for 2,270 gallons. When the meter reached 2,254 gallons the loader noticed product coming out from the top of the trailer. The load was shut down immediately. Approximately 15 gallons of toluene spilled on the asphalt containment area. The spilled material was contained, cleaned and placed in an appropriate container for disposal. Ashland Chemical had a driver onsite and the pump was immediately red tagged and removed from service.				
<b>Recommend Actions Taken:</b>		The owner of the pump, Ashland Chemical, had their certified technician repair the meter and do a calibration check for accuracy on 10/28/2009. The meter was certified accurate by the Ashland Chemical representative at that time.

RAT Def:		Response action that requires expeditious attention to reduce imminent and substantial dangers to human health, welfare, or the environment or an emergency response required within hours or days to address acute situations involving actual or potential threat to human health, the environment, or real or personal property due to the release of a hazardous substance. Characterization of a removal action as removal, not immediate removal or planned removal, started at the beginning of FY 1987. This code now takes the place of immediate removal (IR) and planned removal (PR).

<b>Description of Events:</b>	Driver had cargo tank hooked up to consignee's storage tank to transfer product but he was having problems trying to get his transfer pump to work. He broke down the hoses and was going to leave to get his pump fixed. He forgot to secure the dome cover however and about 5 gallons splashed out at the customer facility before he was aware of the problem. Driver secured the dome and used dry absorb to clean up the spill.					
<b>Recommend Actions Taken:</b>	Driver did not follow procedure. Pretrip and Post-trip inspections are stressed in all of the drivers initial and recurrent training sessions.
